Experience from founding a promising startup has led to developing various technical, business, and interpersonal skills. I have a clear understanding of working on a team to reach successful outcomes. I have strong presentation skills and a deep understanding of the technical material through direct experience. I have had a focus on client-side programming but am actively building backend and DevOps skills.

Objective
The objective is to enter a challenging software development role where I can contribute as soon as possible by quickly and efficiently learning the appropriate technology and stack.

Languages
Javascript, HTML5, CSS3 (Proficient), Python (p
